

ENVIRONMENTAL POLICY

INTATA S.r.l. (the "Company"), with the objective of safeguarding the environment and pursuing continuous improvement in environmental performance, intends to conduct its activities in accordance with the following principles:

- cooperation among all resources and encouragement of active contribution from employees and third parties;
- utmost commitment to preventing pollution and protecting the environment in general;
- attention to the needs of stakeholders, whether internal or external to the organization;
- centrality of the individual and sharing of experience and knowledge.

Therefore, starting from a careful assessment of the context in which it operates, INTATA S.r.l. undertakes to pursue the following objectives:

1. **Ensure**, through its organizational structure, that all applicable compliance obligations relating to its activities—meaning regulatory requirements as well as relevant needs or expectations of stakeholders—are incorporated, communicated, implemented, and respected proactively by all plant personnel.
2. **Identify environmental aspects** and assess the significance of impacts directly related to production or, insofar as possible, connected to the activities of third parties upstream and downstream of the production cycle, defining—within the limits of their capacity for evaluation and influence—appropriate improvement plans aimed at:
 - minimizing emissions into the surrounding environment,
 - protecting soil, subsoil, and groundwater from pollution,
 - minimizing the amount of waste produced by optimizing its management and, where possible, encouraging recycling or recovery,
 - preventing pollution in wastewater discharges,
 - recovering raw materials and natural resources,
 - achieving energy savings.this identification and evaluation process is also intended to ensure that this Policy is kept updated and appropriate to the context in which the Company operates, as well as to the nature and scale of environmental impacts.
3. **Monitor activities** to verify the status and achievement of environmental objectives.
4. **Adopt advanced criteria** for environmental protection, prevention, and efficiency, in order to pursue continuous improvement of performance by promoting the best economically sustainable available technologies and business best practices.
5. **Engage and empower all collaborators**, employees, and stakeholders with respect to environmental protection, pursuing the continuous improvement of each individual's professionalism and sense of responsibility, including through appropriate training, information, and instruction.
6. **Expand the use of tools** such as operational procedures and technical standards for the proper management of activities, based on criteria that ensure environmental protection.

7. **Communicate with collaborators and external stakeholders** (such as Public Authorities and the Local Community) to foster an atmosphere of mutual trust and cooperation.
8. **Require third-party companies** working within the plant to apply environmental standards consistent with those adopted by the organization, thereby contributing to the achievement of improvement objectives.
9. **Cooperate with local entities**, representative bodies, and any other external stakeholders to address specific environmental issues and to enhance and improve relations with the surrounding territory.

Management believes that the success of this Policy—essential for continuity and growth—can be achieved only through the full commitment of all. Therefore, all personnel working within the Plant and, more broadly, for the Company's organization, are required to comply with both the spirit and the letter of this Policy, which applies to all activities related to the Companies.

INTATA S.r.l.
